

Sri Lanka Institute of Information Technology

Project Topic Assessment – 2016

Research Problem:

There are many Enterprise Resource Planning software are available around the world. But many of them are not unique for any businesses and some are very popular around the world. Openbravo Point of sales software is such kind of world famous software and which is used by any marketing companies. Also Openbravo has Enterprise Resource Planning software which is called as Openbravo ERP. This ERP system can be customized to the any language and we are going to customize this one to the Sinhala. By going through these areas we found that there is no such kind of unique ERP software for SriLankan companies in Sinhala language.

Research Area:

ERP Implementation

Solution proposed:

So we recognized a world famous localization guide to implement ERP software in Sinhala language. Simply localization are means of adapting computer software to different languages, regional differences and technical requirements of a target market. Here we are identified current ERP system which has implemented in the university and going to introduce new ERP software in Sinhala language which can be used inside any university in Sri Lanka.

Technologies to be used:

JDK

Apache Tomcat

Apache ANT

NetBeans IDE

Openbravo ERP

PostgreSQL
